## Salem Corporation to supply water using tractors

### Staff Reporter

To meet the drinking water shortage, the City Municipal Corporation has proposed to induct 19 tractors to supply water in select areas.

The vehicles will have a capacity to supply 6,000 litres. The supply will be in few areas in Suramangalam and in Ward 9 and 37. Officials said that tractors would be used from April 1 for one year. A resolution to this effect was recently passed at the council meeting. A tender has been floated.

Last year, the corporation had sunk borewells to overcome shortage of water during summer.
